CSC2043-45 Group 1 Report

Peer Assessment 2: The System, the Final PDF Report and the Process

This Assessment Document is intended to provide you and your assessor with an overview of each team member's involvement in the preparation of CSC2045's Second Deliverable, *The System, the Final PDF Report and the Process*.

Each team should complete <u>one</u> Assessment Document and its content must be agreed by all team members. The completed form should be included at the start of your team's report. **Don't forget to fill in the Group Number and Group Name.**

There are two main parts to the Assessment Document – the Evaluation and the Declaration. Both parts must be completed – otherwise your team's report will not be marked. Arrange a team meeting to discuss the evaluation, and see the note below!

Evaluation	Group Number: 1	Group Name:	Group Name: Group 1					
Name		Contribution of time and effort ¹	Contribution to team- working and motivation ¹	Contributions to this deliverable 1,2	Peer Score (Range 85 – 115)			
Lewis Robinson		5	4	5	115			
Jack Bradley		3	4	3	100			
James McCaughe	ey	0	0	0	0			

¹Values for contribution: 1 = Minimal Contribution; 2 = Reasonable Contribution; 3 = Good Contribution; 4 = Very Good Contribution; 5 = Excellent Contribution

Declaration

"I declare that I have read the Queen's University regulations on plagiarism, and that any contribution I have made to the attached submission is my own original work, except for any elements that I have clearly attributed to third parties. I understand that this submission will be subject to an electronic test for plagiarism and will also be subject to the University's regulations concerning late submission if it is received after the deadline."

Name	Date	Confirmation (use the words shown in the example below!)
Lewis Robinson	26/03/20	I agree to the terms of the declaration
Jack Bradley	26/03/20	I agree to the terms of the declaration

A note on the Evaluation:

The Contribution columns in the Evaluation table are intended to help team members quantify each other's input to the Second Deliverable, before they award agreed Peer Scores. There will not necessarily be a precise correlation between the Peer Score and the Contribution values. However, high Contribution scores, as an indicator of the importance of the team member's work to the success of the project, should normally result in a high Peer Score for a team member. Likewise a low Peer Score would be the expected outcome if Contribution values are low.

Each team member's overall score for the First Deliverable will be calculated according to the following formula, where S_i is Team Member i's overall score, P_i is the peer score received by Team Member i, N is the number of members in the team, and M is the raw mark awarded to the report by the assessor.

$$S_i = \frac{P_i}{\frac{1}{N} \sum_{j=1}^{N} P_j} \times M$$

²This value should consider contributions in the round – direct contributions to required deliverables, and contributions that have made the deliverables possible.

The following guidelines will help you award appropriate peer scores.

If the team agrees that Team Member 1 made minimal contribution, a peer score of 85 would be appropriate for Team Member 1.

If Team Member 1's contribution was excellent (critical to the success of the project from a number of aspects), consider a peer score of 115.

If Team Member 1 made a generally good contribution, doing what was expected of them, they could expect to receive a Peer Score of 100.

Any mark within the range 85 – 115 will normally be accepted by the module Lecturer. However, students are expected to award a range of marks within a team: it is very unusual in a project for everyone to display exactly the same level of ability and commitment, and the Peer Scores should reflect this. Be fair: be prepared to recognise someone who has adopted a leading role in the project, and acknowledge the fact that some contributions will be weaker than others. Uniform marks, or marks outside the range 85 – 115, may require that the Team discuss its decision with the module Lecturer or Teaching Associate, in order to agree a fair distribution of marks. It may be that a team member (for whatever reason) has disengaged from the project entirely, and in such a case a Peer Mark of 0 may be acceptable. Please inform the module Lecturer if a team member has left your group or has ceased to play an active role in the group. Throughout the project, teams should use appropriately named folders in GitLab to co-ordinate their work. Where team members cannot agree a distribution, the module Lecturer's judgement will be final.

Interface design.

Footer

This is the wireframe of the login screen next to the real version. The design was chosen as it is a common style of layout that the user will naturally be able to navigate.

This the wireframe of the homepage(index.php) next to the real version. All pages on the site are fully responsive and scale as can be seen in this example where the bottom two rows of content are hidden below the footer and will appear with scrolling. There is a blank image on the page however this is a dummy show with no content that was created to test pagination,

so this is not erroneous. The card layout is repeated across the site and is incredibly useful as it allows for pagination to be easily implemented due the rows and columns needed to create a card layout.

			Header			
			Nav Bar			
	Profile image		Page Text	Interactivity section. Changes		
				depending on if user is logged in and if the user owns the profile. Forms appear here		
	Account Name Username		Image Gallery			
Upco	ming show section only appears if a performer	profile owner is	Upcoming Shows			
	Card containing show image and information and a link to the show page		Card containing show image and information and a link to the show page	Card containing show image and information and a link to the show page		
			Footer			

This is the wireframe of the profile page next to the real counterpart. As the user Kevin is a performer, he gets a section of his profile where his upcoming shows are displayed. The card layout is replicated in this section of the page allowing for consistency across the site. The page is responsive as can be seen above and scales to the size of the screen.

BIGFESTBELFAST													

This is the wireframe for the application page next to the screen dump of the live version. This design is responsive so will scale correctly to the screen size allowing the performer to use any device to make an application.

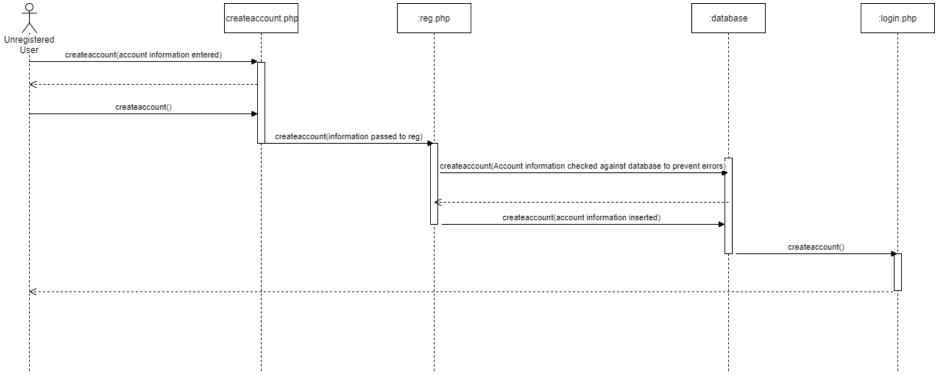

Here is a screenshot of the inbox page. The responsive card design has been carried over from other pages and a heading for the standard messages section has been added to help differentiate between sections for the users with permissions to view applications or announcements.

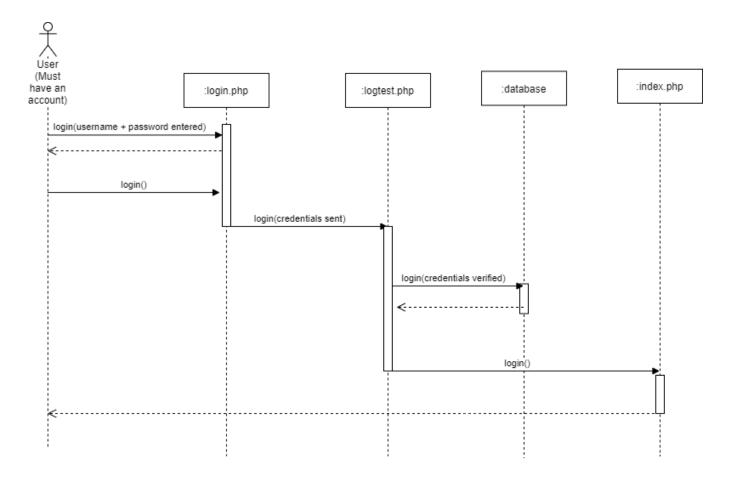

This is the wireframe and screenshot for the venue page. As can be seen the design is still responsive and the design from the profile page has been replicated for consistency.

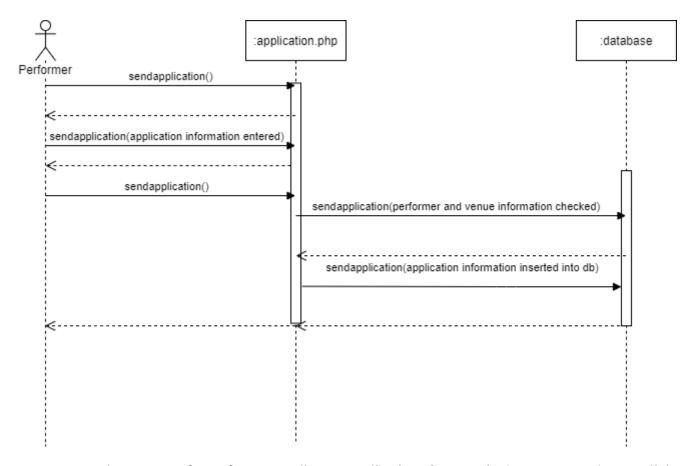

This is the sequence diagram that represents the process of createing an account. In this diagram () means button press/redirect. As can be seen the user enters their information and clicks the create account button once some prechecks are conducted in the create account class. The account information is passed to reg.php and then checked with the database before being inserted. The user is then taken to login page and regains control.

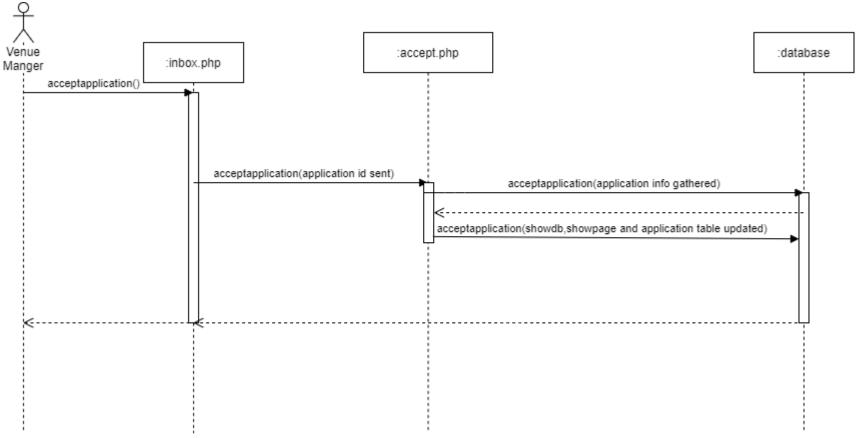

As can be seen above this sequence diagram, represents the login process. Once again () represents a button click or redirect. The user enters their username and password and then clicks the login button. The login credentials are sent to logtest.php where they are sent to the database and verified. Control returns to logtest.php which sets the relevant session variable based on the user type. The user is then redirected to index.php where control is returned to them.

This sequence diagram represents the process of editing the profile page. As before () represents a button click or redirect. The user clicks the edit profile button on their profile page. They then are sent to profilepagedit.php where they regain control and enter their new content and click the save changes button. Savechanges() carries the changes to savechanges.php where security validation is conducted, and it is ensured previous content is not set to null if the user has not chosen to change this content. The user is returned to their profile page where they can see their changes and they can take further actions.

This sequence diagram represents the process of a performer sending an application. Once again () represents a button click or redirect. After the user has entered application.php control is returned to them. They enter the application information and click the send button. Sendapplication() then sends the information to the database where the performer and venue information is checked. The application is also checked to ensure there is no double bookings. The application is then inserted into the database and will be displayed in the manager's inbox.

This is the diagram that represents the process of the venue manager accepting an application. Once again, the () represents a button click or redirect. The application id is sent to accept.php. Accept.php then sends the application id to the database to retrieve the information linked to it. A record is then created in showdb and showpage and the application table is updated.

Implemented-Related Documentation

The system was tested using grey box testing. Grey box testing is a mixture of black and white box testing, so the outcome is known but the testing is done from the perspective of a user. Due to the limitations of CSC2043's project requirements, PHP frameworks were not allowed to be used so unit testing could not be conducted. This is only a partial representation of the testing plan. The remainder of the tests will be in the appendices.

Testing for accept application:

Test Accept

Test	Accept

Wireframes for almost all pages in the site can be found in the screen mock ups and screen dumps folder on the GitLab.

Sequence diagrams for almost all processes on the site can be found in the sequence diagram folder on the GitLab

Secure System Features.

The system was secured using several methods.

One of these methods is using session variables for user authentication. As can be seen below when the user logs in they are given a session variable based on their user type in the database. These sessions carry on through the site until logout. They have been used the sites content based on user and prevent the user from accessing certain pages.

```
if($sess == "admin"){
    $_SESSION['admin'] = $id;
    echo "admin";
    echo $_SESSION['admin'];
} elseif($sess == "venue"){
    $_SESSION['venue'] = $id;
    echo "venue";
}

elseif($sess == "performer"){
    $_SESSION['performer'] = $id;
    echo "performer";
}

elseif($sess == "public"){
    $_SESSION['public'] = $id;
    echo "public";
}
header("Location:index.php");
```

Another secure feature was using prepared statements to prevent SQL injection attacks. An example of a prepared statement can be seen below.

```
$q = $conn -> prepare("SELECT * FROM user WHERE username=? and password = MD5(?)");
$q -> bind_param("ss",$_POST['u'],$_POST['p']);
$q -> execute();
```

Another security feature implemented was a function to prevent cross site scripting attacks. An example of the function and how it is used can be seen below.

```
function htmlescape($input){
echo htmlspecialchars($input, ENT_QUOTES,'UTF-8');
}
```

Above function:

Below function in use:

```
<?php echo htmlescape($recipientname); ?>
```

Team Minutes

Minutes for Team Group 1 Week commencing $20/01/2020\,$ Date of this minute $23/01/2020\,$

- Work on booking page

•
*Printouts giving an overview of interim deliverables may be added as a supplement to these minutes. Actions Planned (Briefly list the actions required of each team member for the next week.)
Lewis Robinson(1):
 Update design across site

- More testing
- Start sequence diagrams
- Start screen mock ups/dumps
- Update application system

Jack Bradley (2):

- Work on Booking system
- Work on Show pages
- Start Testing
- Start Sequence diagrams.

Minutes for Team Group1 Week commencing 9/03/2020 Date of this minute 12/03/2020

The following team members were present

Name (printed/typed)	Signature
Lewis Robinson	LOW RObinson
Jack Bradley	Pacy

Task Reporting (Briefly list the progress for each team member in the last week.*)

Lewis Robinson (1):

- Continued testing
- Improved design
- Fixed various bugs
- Started View for performers and venues Schedule
- Finished venue promo material upload and download.
- Improved sequence diagram.

Jack Bradley (2):

- Worked on show page
- Continued work on booking system
- Continued work on overall site schedule

*Printouts giving an overview of interim deliverables may be added as a supplement to these minutes. Actions Planned (Briefly list the actions required of each team member for the next week.)

Lewis Robinson (1):

- Fully complete redesign
- Fix bugs
- Finish testing of own features
- Start and finish sequence diagrams for own features
- Finish view schedule view for venue and performer

Jack Bradley (2):

- Work on schedule
- Work on show page
- Work booking
- Start testing for own features
- Start sequence diagrams for own features

Minutes for Team Group 1 Week commencing 16.03.2020 Date of this minute 21/03/2020

Test plan template:

https://www.softwaretestinghelp.com/test-case-template-examples/COVID-19 changes.

In order to cope with the changes to the group work caused by COVID-19 a group Discord chat was set up. Discord is a free VoIP program that allows for group chats to be set up as well as screen sharing to take place during calls. This made it extremely useful for solving errors and due to Discord being on both mobile and PC it allowed for the team to commnicate on the go. While not as effective as an in person team meeting it allowed for problems to be easily shared and solutions to be given. A screenshot of the chat can be seen below:
